MPIOM / REMO / HD coupling

REMO / Global MPIOM setups

- MPIOM grid (every 12th grid line is shown)
- REMO setups

MPIOM:
Horizontal resolution:
~5 – 30 km in NA
Vertical resolution:
30 levels

REMO:
Horizontal resolution:
1/3° (37 km)
Vertical resolution:
27 hybrid levels

Coupling: 1 hour

IPCC AR4 ECHAM5/MPIOM downscaling

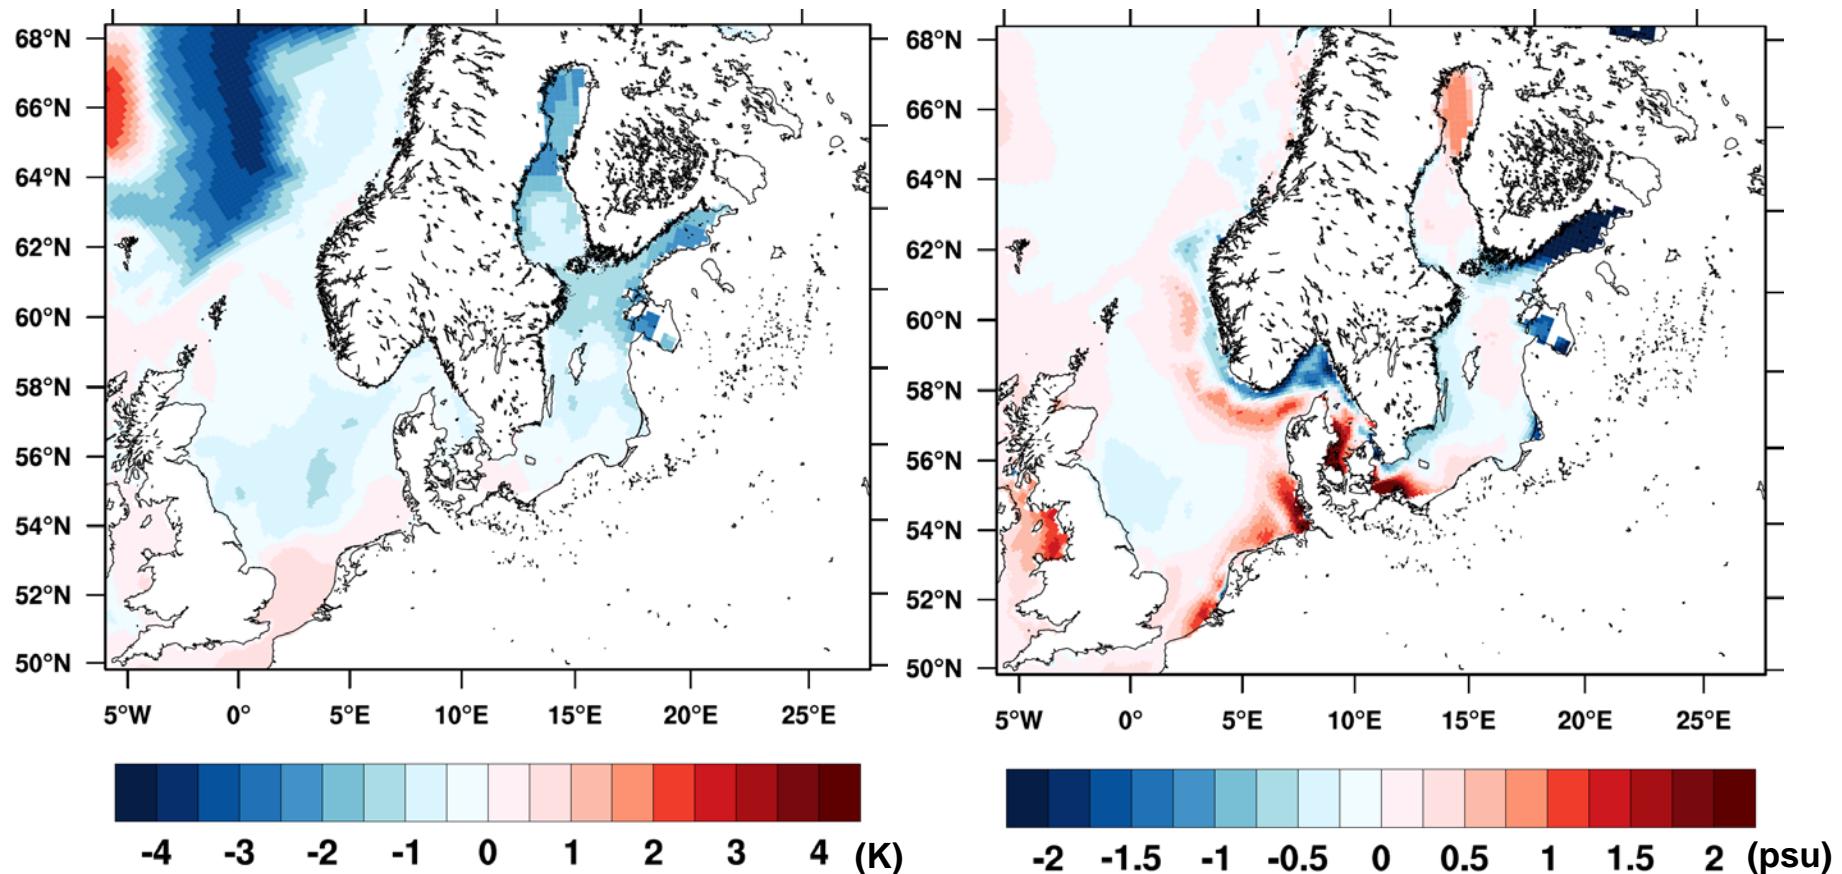

Simulations with ECHAM5/MPIOM forcing

ECHAM5/MPIOM data from IPCC AR4:

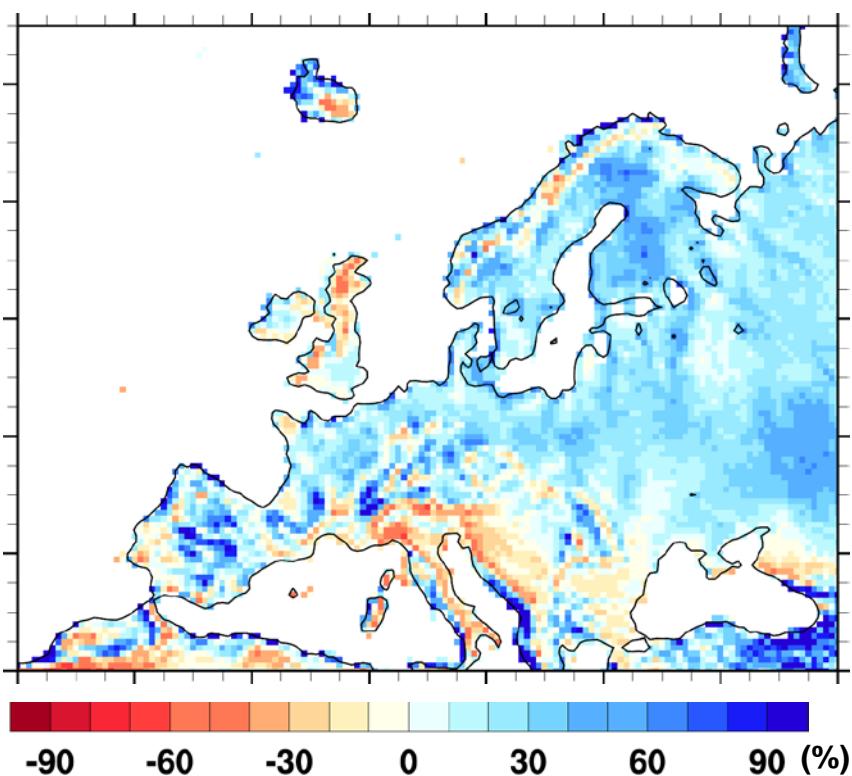

C20(3): 1920 – 2000 + A1B(3): 2001 - 2099

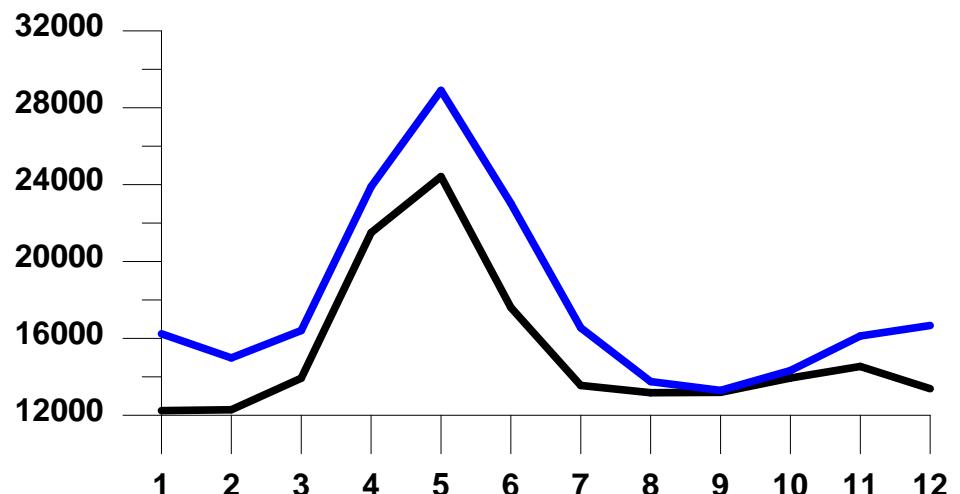

1980-2000 mean SST (left) and SSS (right) difference: model – GDEM climatology.

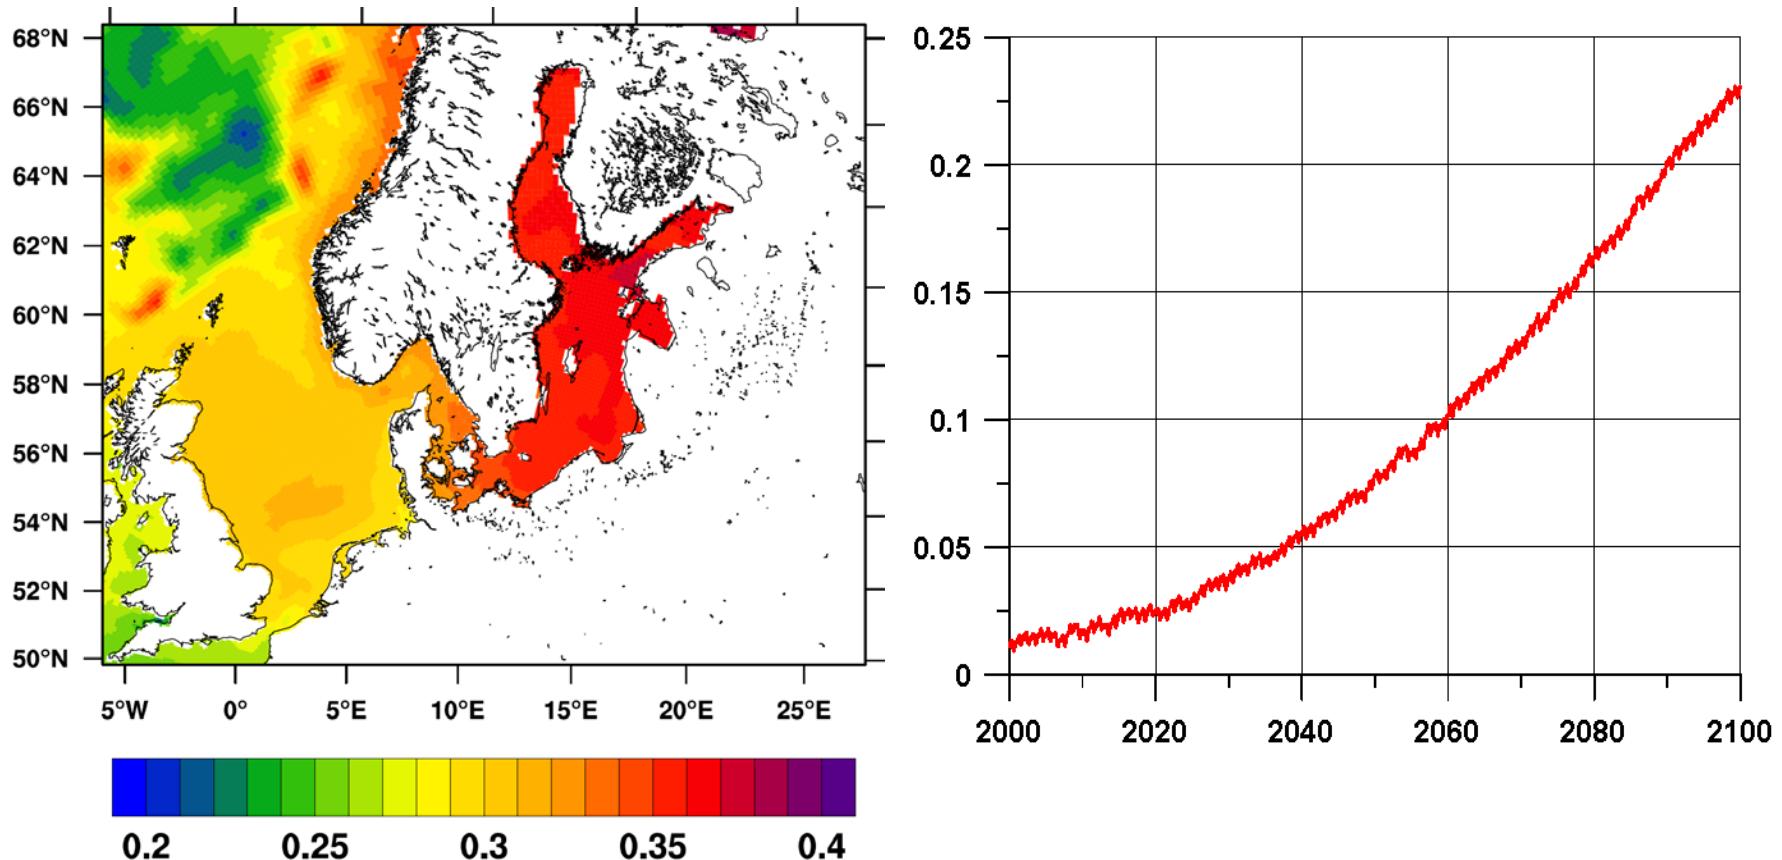

**Mean 1970-1999 relative precipitation difference:
model – CRU divided by CRU.**

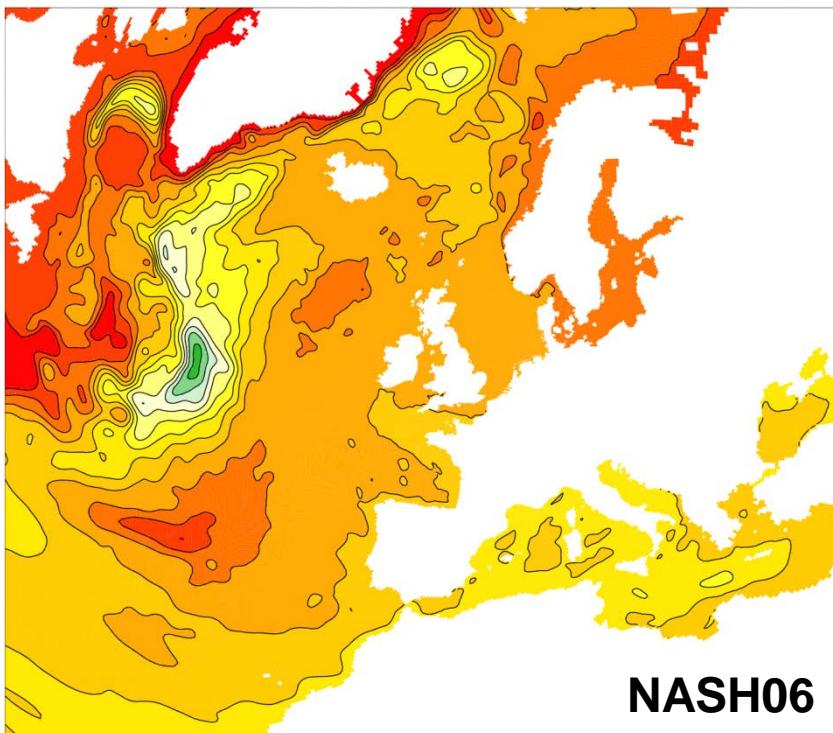

**Mean 1970-1999 Observed (black) and modeled (blue)
climatological river runoff (m³/s) into the Baltic Sea.**

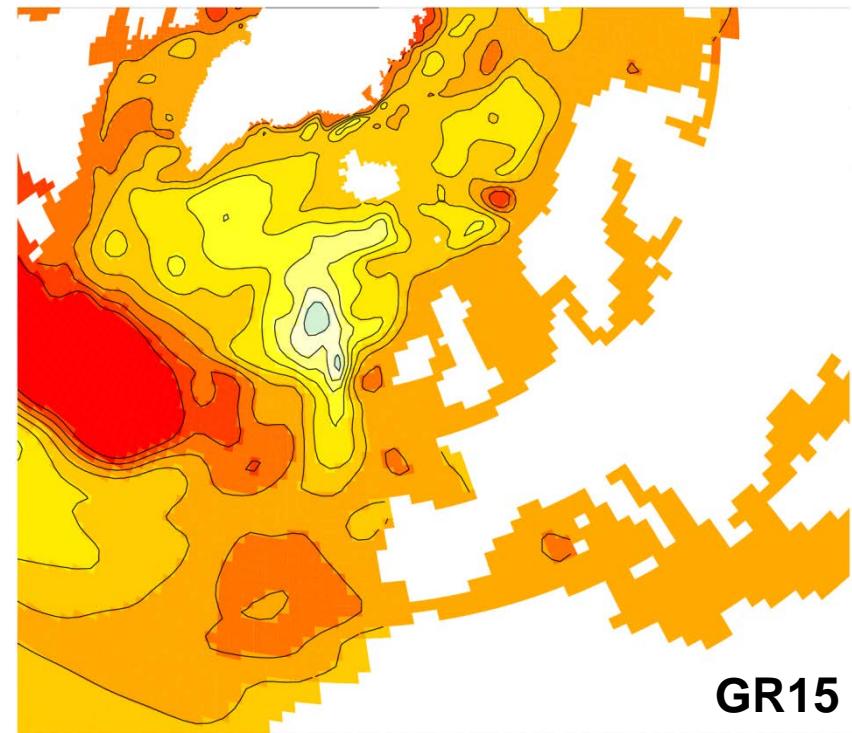

2080-2099 – 1980-1999 mean sea level change (left) and global steric sea level change (right)

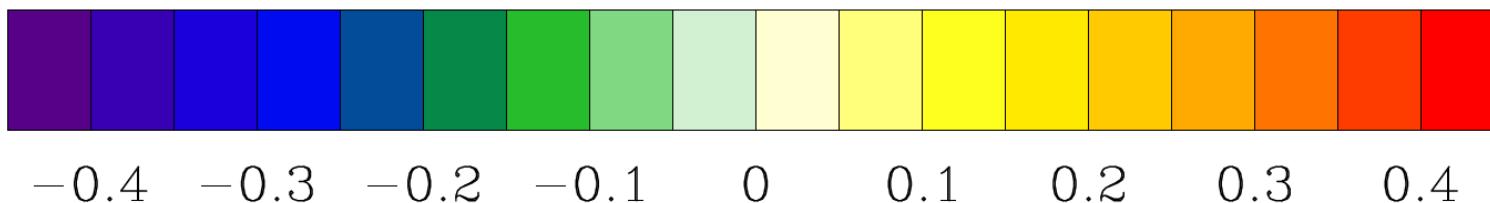

Mean sea level change (2080-2099 - 1980-1999)

NASH06

GR15

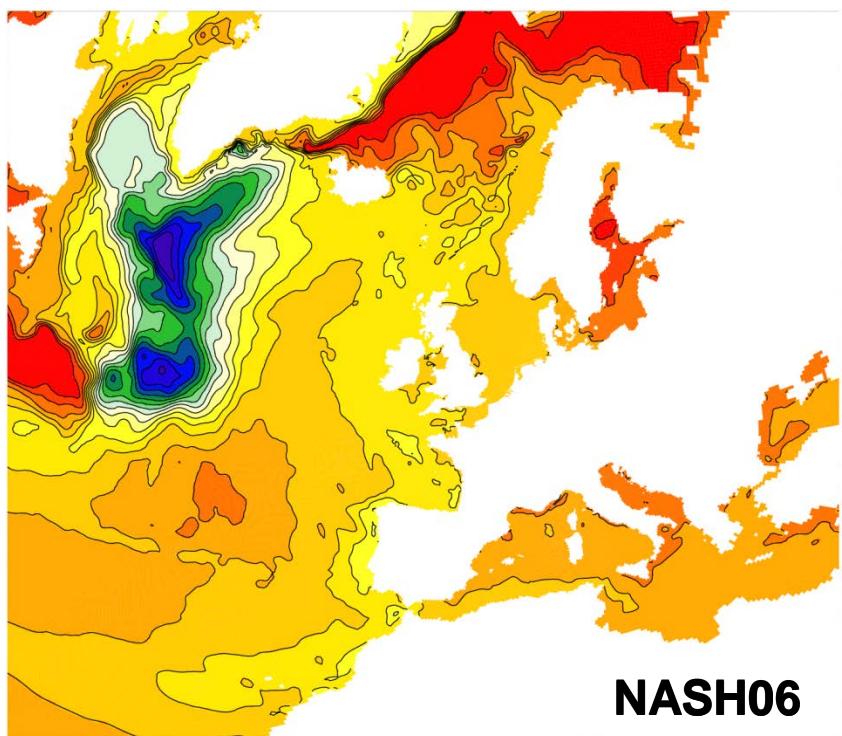

Mean 2089-2099 global steric sea level change +0.1978 m

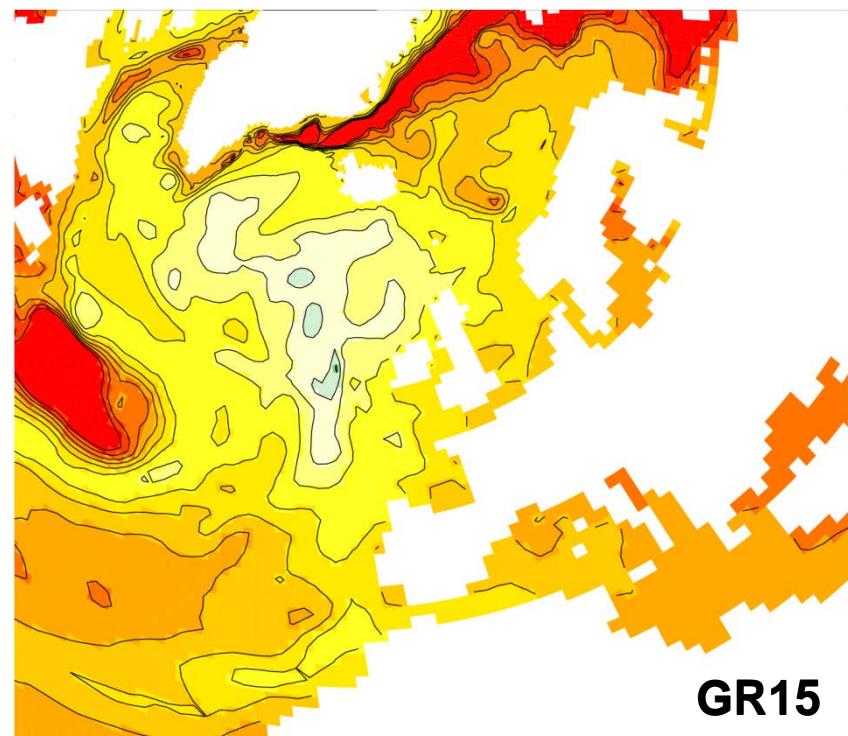

Max-Planck-Institut
für Meteorologie

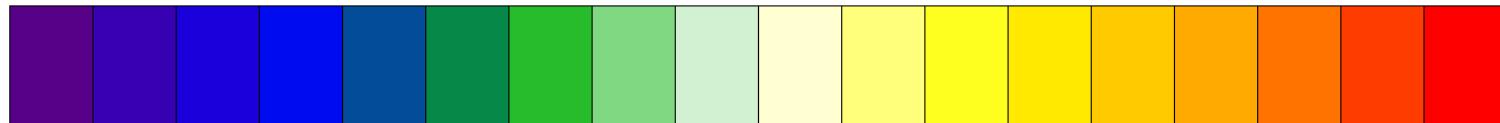

Mean SST change (2080-2099 - 1980-1999)

NASH06

GR15

MPIOM/REMO

MPIOM/ECHAM5

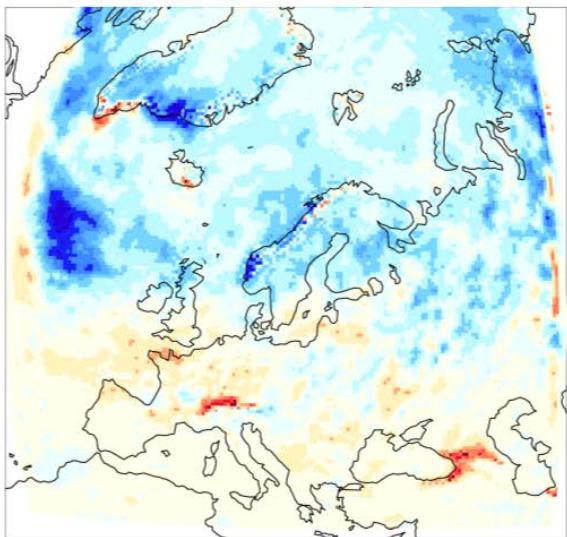

2080-2099 - 1980-1999 (DJF)

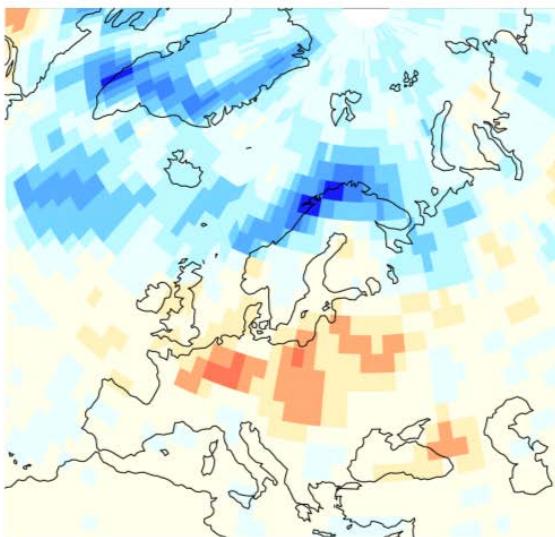

Changes in precipitation simulated by REMO/MPIOM (left) and ECHAM5/MPIOM (right)

MPIOM/REMO

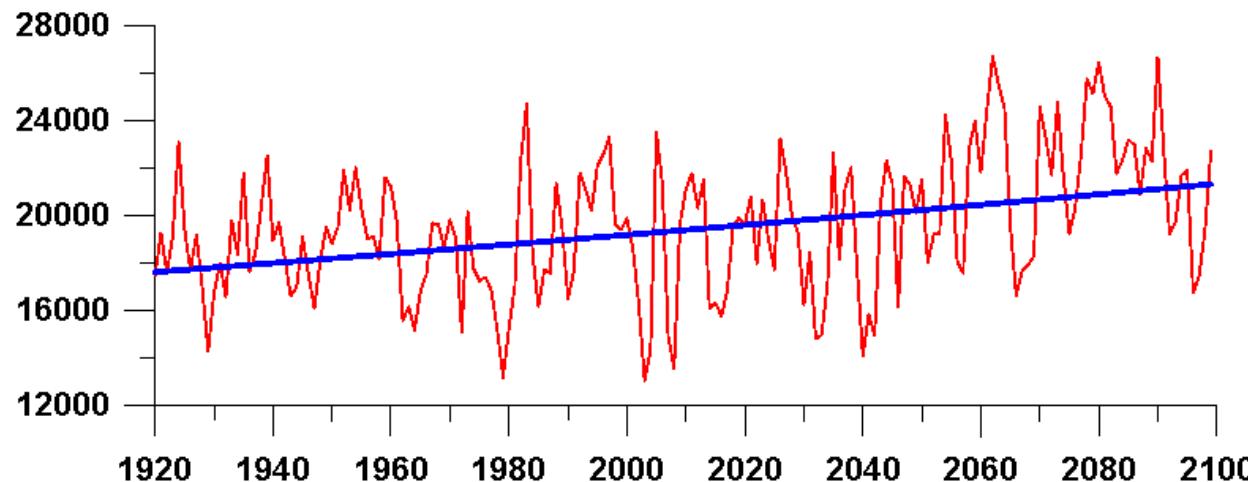

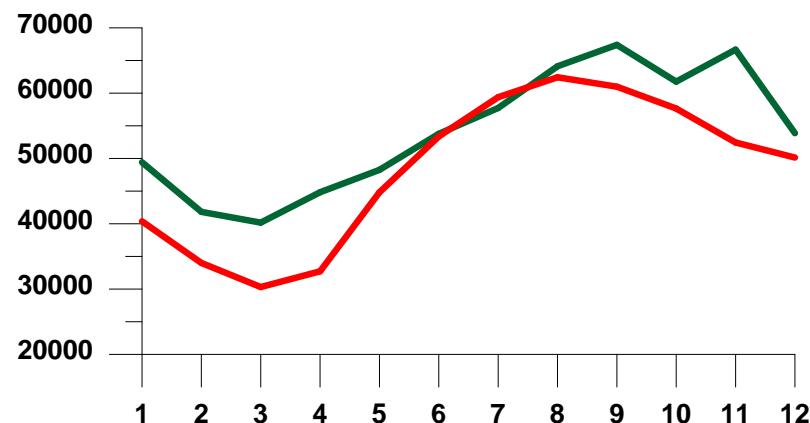

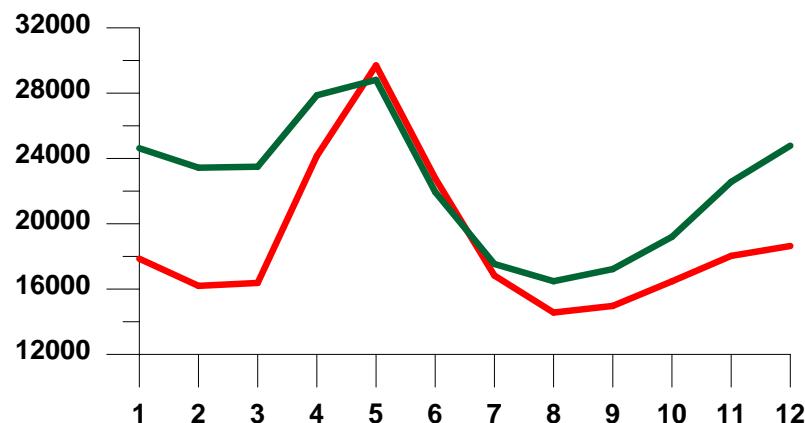

MPIOM/ECHAM5

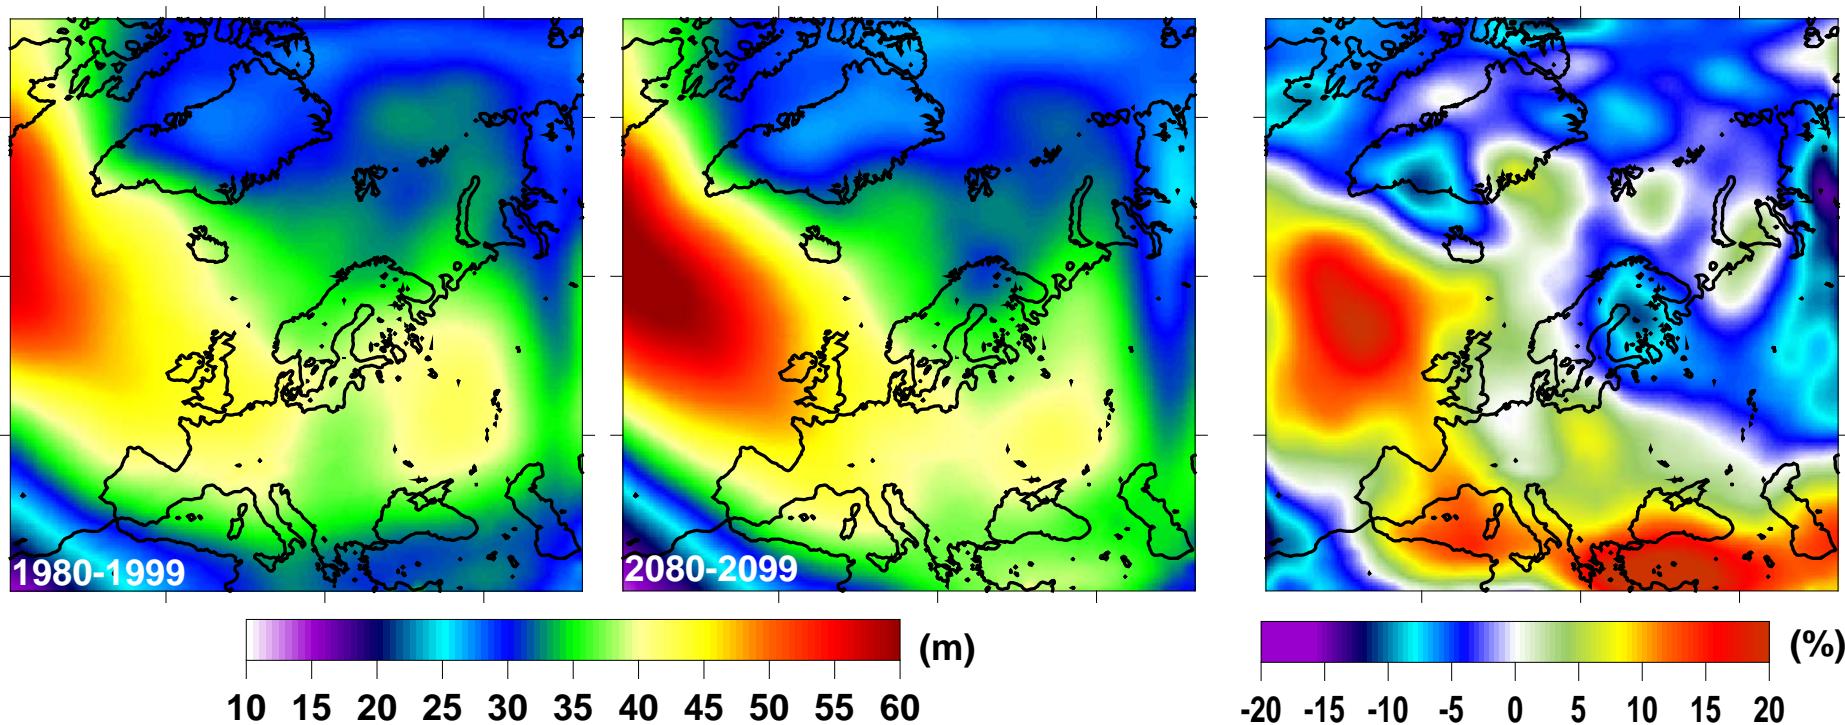

2080-2099 - 1980-1999 (JJA)

1970-1999 (red) and 2070-2099 (green) climatological river runoff (m^3/s) into the Baltic Sea (left) and mean total precipitation integrated over the Baltic sea catchment (m^3/s) .

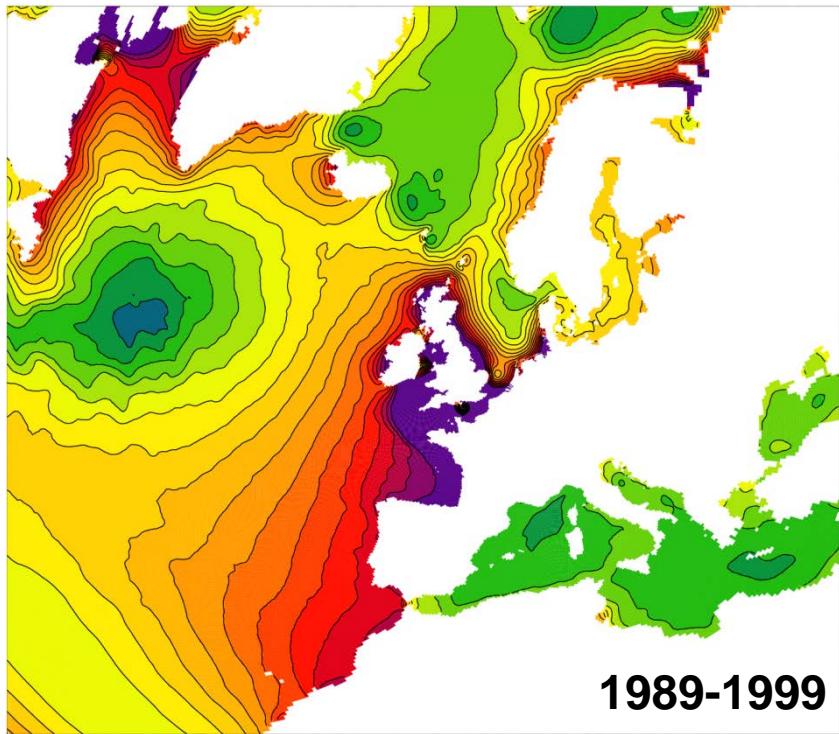

*Annual mean
modeled river runoff
into the Baltic sea
(m^3/s)*

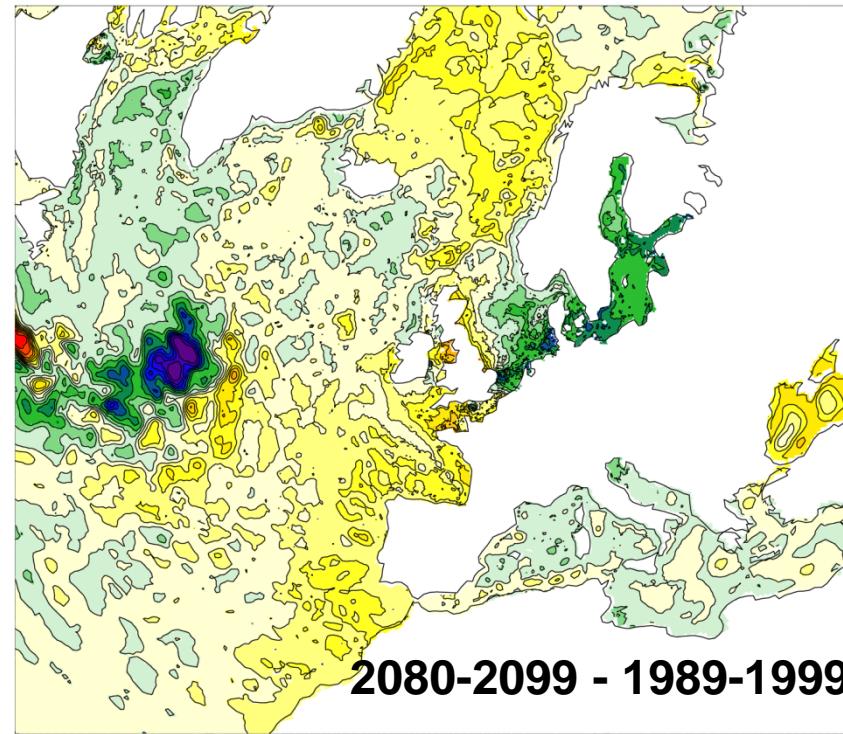

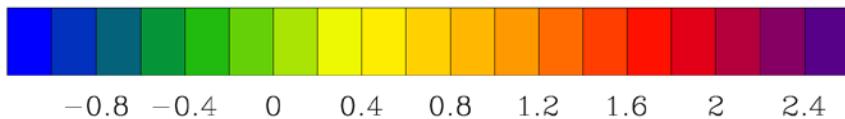

Standard deviation of DJF 500 hPa height (m) due to transient eddies in the bandpass regime (2.5-6 days) and its relative change (right)

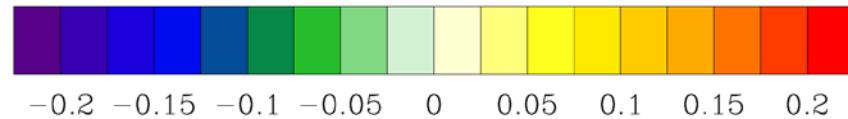

Upper 1% Percentil of daily sea level maxima and its change (mean sea level change is excluded)

1989-1999

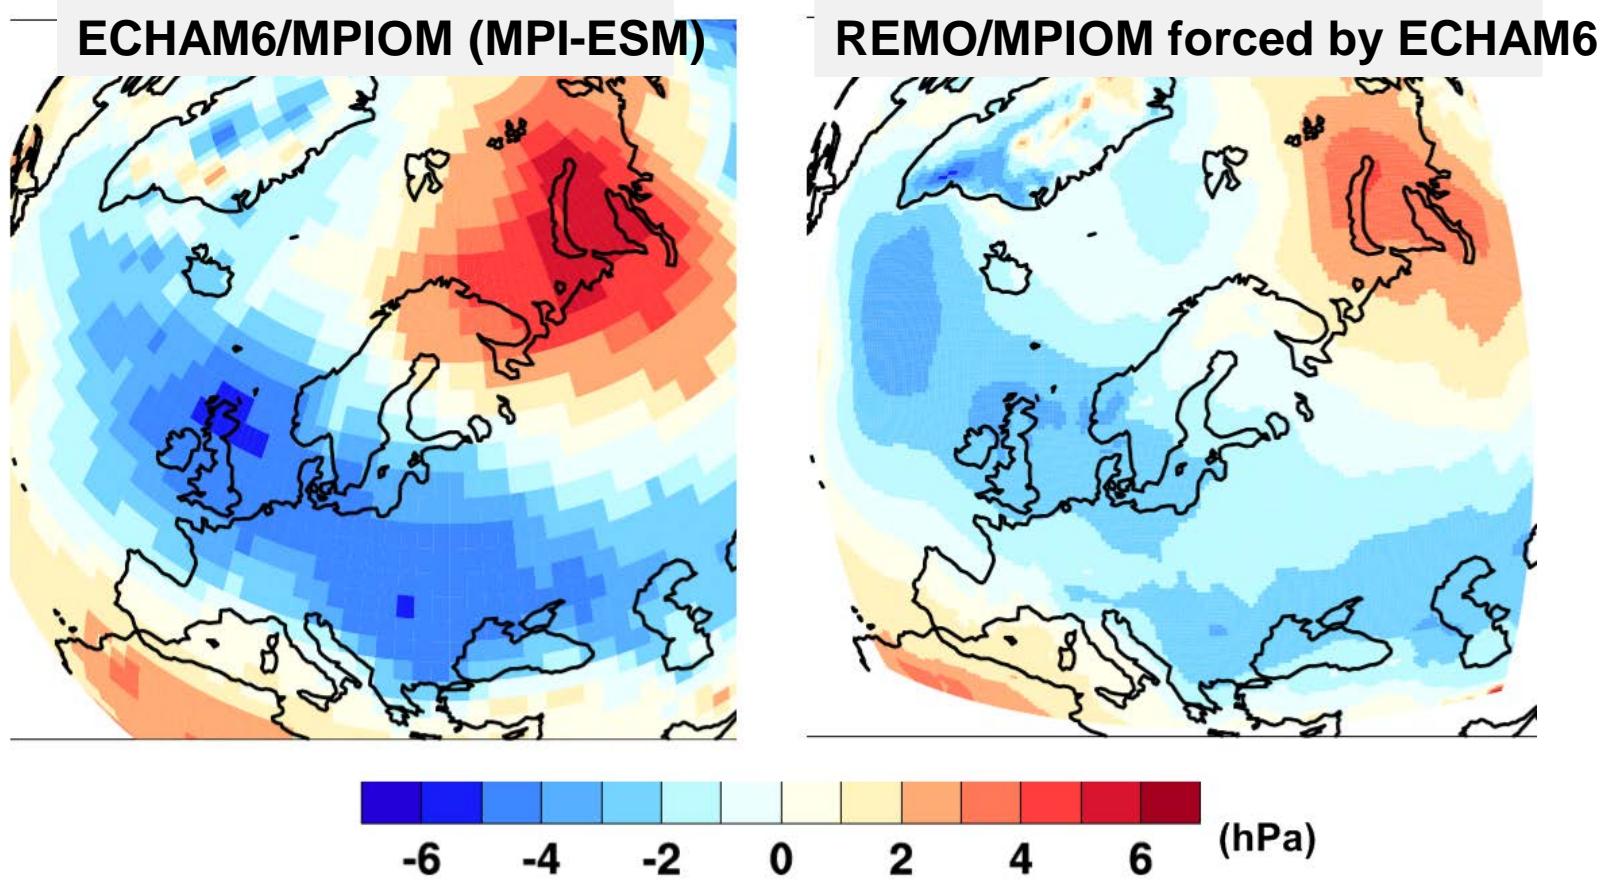

2080-2099 - 1989-1999

Outlook: Simulations with MPI-ESM CMIP5 forcing

DJF mean sea level pressure difference. Model – ERA40

2m temperature difference. Model – ERA40

Decadal predictions downscaling

Surface temperature predictive COR skill at lead time 2-5 years. The observations were taken from HadISST for the SST and GHCN/CAMS for SAT.

Decadal predictions downscaling

Mean over the North Sea SST anomalies: **HadISST**, **SST from the global ECHAM6/MPIOM hindcast** and **SST from REMO/MPIOM** at lead time 2-5 years.

Max-Planck-Institut
für Meteorologie

Observed (a) and modelled (b) M_2 tidal maps. Co-tidal lines are with 30° interval
